Carpet Care

Our carpets

Designed and manufactured in the UK, our carpets are created to deliver lasting performance with minimal maintenance. The fibres are naturally resistant to stains and moth damage, meaning no additional chemical treatments are required. A built-in UV stabiliser also helps protect against fading, keeping your carpet looking its best for longer.

Follow these simple steps to help you get the most from your carpet:

Vacuum regularly

Regular vacuuming removes surface dirt and helps maintain a clean, fresh appearance.

Treat spills immediately

Prompt attention helps prevent stains and keeps your carpet in excellent condition.

Protect high-traffic areas

Use mats or runners in entrances and busy areas to reduce wear and prevent dirt being carried through the home.

Professional cleaning

Occasional professional cleaning removes deeper dirt and helps restore the carpet's original appearance.

TOP TIPS

Act quickly

The sooner a spill is treated, the easier it is to prevent staining.

Use a clean, white cloth

Blot gently using a clean cloth, paper towel or tissue to avoid colour transfer.

Avoid rubbing

Blot rather than rub to protect the carpet fibres.

Restore the pile

Lightly brush the pile once dry to maintain its appearance.

Work from the outside in

Treat stains from the outer edge towards the centre to avoid spreading.

Seek expert advice if needed

If unsure, consult a professional carpet cleaner.
